SKILLS

- JavaScript | TypeScript | Golang | Python | Rust | ReactJs | NextJs | NodeJs | ThreeJS | HTML | CSS | C++ | C#
- Redis | RabbitMQ | REST-API | GraphQL | WebSockets | MQTT | gRPC | tRPC | PostgreSQL | MongoDB
- Git | CI/CD | Docker | Amazon AWS | Google Cloud | Netlify | Vercel | Firebase
- System Design | Microservices Architecture | Backend | Frontend | Full-Stack | UI/UX | Figma | English, Indonesia

EXPERIENCE

Move! Ai Pte Ltd

Singapore

Senior Software Engineer (Full Stack), RNS & FMS

October 2025 – Present

- Took on Team Lead responsibilities for the RNS and FMS fullstack team, including onboarding, mentoring, task assignment, and code reviews.
- Served as the primary technical owner of Seirios RNS and FMS UI and backend, ensuring system stability, release readiness, and defect prevention.
- Acted as the technical interface between Business and Engineering teams to translate client requirements into production features.
- Provided escalation level client support for complex UI, backend, and system integration issues.
- Collaborated closely with the Robotics team during critical development and integration phases to unblock delivery and resolve cross system issues.

RNS Product - Software Engineer, Fullstack

March 2024 – September 2025

- Developed dynamic robot controller UI in Next.js, enhancing the user experience for robotic operations.
- Built REST APIs using Express.js, enabling seamless external client integration.
- Integrated backend functionality using Apollo GraphQL with Robot Operating System (ROS), optimizing data handling and real-time updates.
- Collaborated with Robotics team to resolve client UI issues and implement new features.

SIIX-AGT Project – Software Engineer, Fullstack

July 2023 – February 2024

- Developed an efficient HTTPS Proxy server utilizing Express.js for API communication.
- Ensured high-quality solutions through code reviews and best practices.
- Implemented WebRTC for real-time communication for robot development.

PT. Tristar Surya Gemilang - Contract

Indonesia

Project Sisappra Satpol PP (Revamp) - Tech Lead

July 2025 - March 2026

- Led a 9-member engineering team to deliver and maintain scalable government reporting systems.
- Standardized code practices, cleaning up 3,000+ warnings and errors, and improving overall codebase health.
- Mentored colleagues through code reviews and technical guidance, fostering collaboration and growth.

Project Sisappra Satpol PP (Revamp) - Software Engineer, Backend

February 2024 – June 2025

- Led backend team in applying coding, testing, and deployment best practices to improve productivity and code quality.
- Optimized backend architecture using Golang entirely and improved the database structure to be compatible with microservices.

Project Bank BJB - Software Engineer, Frontend

February 2023 – January 2024

- Engaged in developing a Loan Management System (LMS). Utilized Next.js and Mantine.dev for the frontend, integrating them with more complex SQLServer databases.
- Ensured the delivery of high-quality solutions, troubleshoots bugs and conduct code reviews

Project Sisappra Satpol PP - Software Engineer, Fullstack

November 2022 – January 2023

- Developed daily reporting web app, utilized ReactJs and Bootstrap for the frontend, integrated data into the dashboard
- Established core reporting endpoints using combined Fastify with Sequelize,
- Leveraged Docker to create a Golang container for seamless image uploading functionality
- Lead core module (reporting module), gather complex information on requirements clarification, code reviews, troubleshooting issues, and provides valuable technical advice

PT. Guna Bangun Perkasa

Malang, Indonesia

Technical Project Administration and Analyst - Assistant Project Manager

April 2018 – August 2023

- Analyzed large-scale infrastructure project data (Rp 50B+ budget, 40,000+ truck trips).
- Built reusable Excel-based tools to streamline reporting and budgeting for field teams

PROJECTS AND OTHERS EXPERIENCE

Software Engineer, Blockchain - (S16 Project) June – July 2025

- Built real-time price feed module using Cosmos SDK, enabling dynamic transaction and daily limit enforcement.
- Designed pipeline for fetching and validating token values in USD.

Zoune Coffee – Founder / Frontend Developer 2021 – 2022

- Designed and launched brand website using Next.js and Tailwind.
- Contributed to branding, business development, and product design.

Notable Personal Project

- <https://markidraw.netlify.app/> simple drawing app, utilized react, typescript, konva and deployed in Netlify

EDUCATION

Gadjah Mada University Sleman, Indonesia

Bachelor of Science (*Computer Science and Electronics Department*) Graduation Date: Feb 2017

- **Final Assignment:** Comparison of Net Power That Produced by Solar Panel with Fixed Direction and Variable Direction – Arduino, C++
- **Honour Project:** Unit Student Coordinator of Student Community Service (KKN-PPM) on Nglebak Village

LEADERSHIP & INVOLVEMENT

Gadjah Mada University - Student Community Service (KKN-PPM UGM) Blora, Indonesia

Unit Student Coordinator July 2015 – August 2015

- Collaborated with 19 college students from four clusters to fulfill community service on 3 of 4 sub-village under Nglebak village and made 31 community service programs for villagers
- Managed 2 projects; 1 unit project is to mapping village area to inventory of village development potential and 1 subunit project to check solar panel voltage that distributed on Nglebak sub-village
